

# Linen Berry Finishing

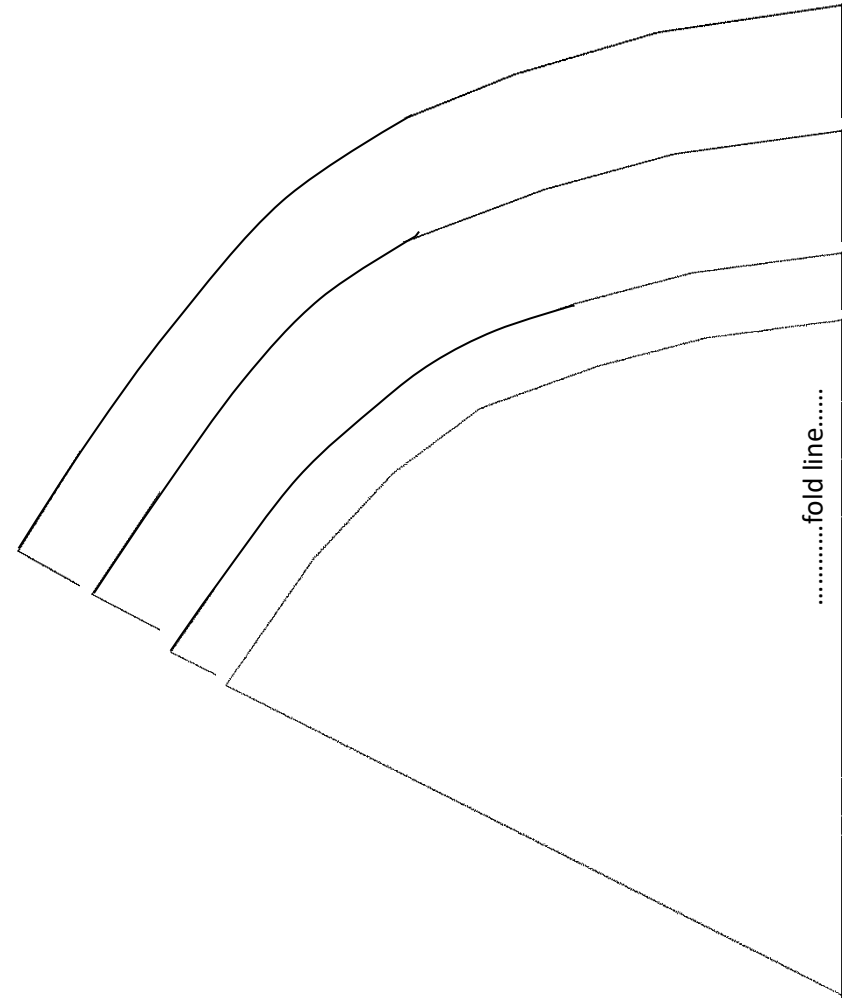

## Template for finishing the linen berries

Make a full size paper pattern using these templates, which represent one half of the shape. There are four templates here, superimposed on top of each other. The largest template is for 28 count fabrics, then 32 count, 36 count and the smallest for 40 count. Trace the size you need - I keep a template traced on to clear plastic for each fabric count handy to use whenever I'm finishing berries.

The berry is ready for your decorative top treatment. In most cases, I prefer to embellish the top material (usually felted wool) first, and then attach the entire piece to the berry.

This scallop-shape cap is one I often use. Please note that this template is NOT to scale and you may need to adjust depending on the size of your berry and your desired finish.

*These templates do NOT include a seam allowance – use these to cut the fusible interfacing for your berry.*

*ALWAYS verify the template is the correct size for your berry before cutting!*
